SUMMARY

Full-stack developer with 3 years of production experience building customer-facing systems in Java/Spring Boot, React, and TypeScript, including PayPal/Stripe integration for a platform processing 200K+ daily transactions and Node.js microservices handling 100K+ daily records. Hands-on Spring Boot/Java backend work alongside production AI integration: built a RAG-based conversational feature (LangChain, pgvector, Gemini) with verified prompt-injection resistance and use AI coding agents as a standard part of my development workflow. Comfortable owning features end to end inside Agile, cross-functional teams, from schema design through deployment, troubleshooting, and optimization.

TECHNICAL SKILLS

- Backend: Java (Spring Boot, JPA/Hibernate), Node.js, Express.js, Python, FastAPI, PHP, Laravel, REST API design, microservices architecture
- Frontend: React.js, JavaScript/TypeScript (ES6+), Vue.js, Next.js, HTML, CSS
- AI/Agentic Development: LangChain, RAG pipelines, vector databases (pgvector), Gemini embeddings and generation, AI-coding-agent-assisted development workflows, prompt-injection testing
- Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL
- Cloud and DevOps: Git, GitHub Actions, CI/CD, Docker, AWS (Cloud Practitioner certified), Linux
- Methods: Agile/Scrum, SDLC, unit testing, integration testing, code review, debugging and performance optimization

PROFESSIONAL EXPERIENCE

Peanut Square LLP

July 2022 – July 2023

Laravel Developer

Ahmedabad, India

- Built the PayPal and Stripe integration for a PHP/Laravel platform handling 200K+ daily transactions as a systems design challenge: defined the API integration architecture, implemented error recovery and timeout-handling logic, and applied security-aware coding practices to protect payment data at every layer of the transaction flow
- Led a migration of 1M+ records from MySQL to MongoDB, redesigning the relational schema into document-based collections and validating data integrity throughout the cutover, achieving a 40% reduction in query latency
- Built a Python OCR pipeline to convert document images into structured text data, implementing image preprocessing and text extraction logic, then integrated the output into the platform's backend data pipeline to process unstructured document inputs automatically.

Dev Information Technology Ltd

July 2020 – July 2022

Software Developer

Ahmedabad, India

- Built and maintained Node.js microservices and REST APIs for a platform processing 100K+ daily records; designed backend service components, wrote technical specifications, and maintained Jira and Confluence documentation to align QA and stakeholders with implementation decisions across Agile delivery
- Diagnosed API performance degradation through profiling and query analysis; implemented database indexing, query optimization, and Redis caching to reduce response times, then delivered the critical business feature on the optimized foundation without regression and bringing back the uptime to around 99%
- Developed Vue.js frontend components and validated technical requirements with a German client through structured sessions, confirming delivered functionality matched specifications before each sprint sign-off.

ADDITIONAL EXPERIENCE

ONroute

Dec 2023 – Present

Customer Service Representative (Part-time)

Woodstock, ON

PROJECTS

Order Service Microservice | Java/Spring Boot CRUD Microservice | [GitHub](#)

- Built a Spring Boot 3.5 microservice (Java 17, Spring Data JPA/Hibernate, PostgreSQL) implementing a full CRUD REST API with a layered controller-service-repository-entity architecture, global exception handling, and a custom not-found exception with proper HTTP status codes

Rubin Scout | Astronomical Alert Processing Platform | [Live Demo](#) | [GitHub](#)

- Designed and built a Python/FastAPI platform ingesting live astronomical alert data from three external research APIs on a scheduled daily basis, with 90-day data retention and a 66-test automated suite, owned end to end from a 16-requirement PRD through production deployment
- Built Ask Rubin Scout, a conversational RAG assistant using a LangChain LCEL chain over a pgvector store inside the platform's existing Postgres database, with Gemini handling embeddings and generation; added retry logic on both calls and verified prompt-injection resistance against a live attack.

MediLight | AI-Powered Prescription Dispensing Dashboard | [Live Demo](#) | [GitHub](#)

- Built a pharmacist-facing prescription dispensing dashboard using React and dual AI OCR (Gemini Vision and Tesseract.js); designed a PHI protection architecture that extracts and redacts patient data locally before any network transmission, with AI API keys managed server-side only through a backend proxy.

EDUCATION

Fanshawe College | Ontario College Graduate Certificate, **Business & Information Systems Architecture** | London, ON
| Sept 2023 - Apr 2025 | cGPA 3.97 | Dean's Honour Roll (Sem 2-4)

Gujarat Technological University | **Bachelor of Computer Engineering** | Sept 2017 - Apr 2020 | cGPA 8.35/10
